About code:

The version of python is python3.6 and should have numpy, random and matplotlib.pyplot installed

There are kmeans.py and data.txt

How to run:

    You should first enter the current folder in cmd.

    That is, you should first unzip the 'code' folder and go to the directory of 'code' in cmd.

    Make sure kmeans.py and data.txt are both in 'code' folder.

    Then you can use following command:

        >python kmeans.py

```
D:\2019Spring\Data Mining\Project4\code>python kmeans.py
```

    Then you will get cluster result and clustering graph.
